

This editor extension designed for the construction class diagrams of your project and code architecture visualization. You can see on screenshots below how it looks like.

Package contains few empty example classes to showcase the expansion work. After you imported package, you can open new “My Architecture” window

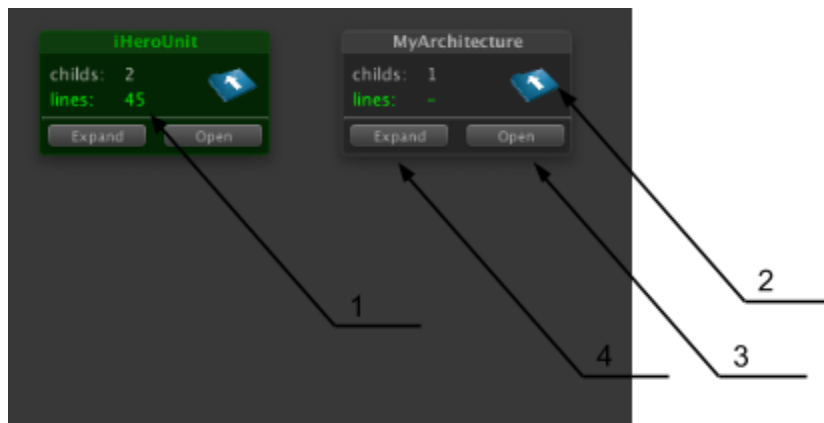

After You open window you will see “Top Level” classes of you project. This is the class witch doesn't have a parent (base) class.

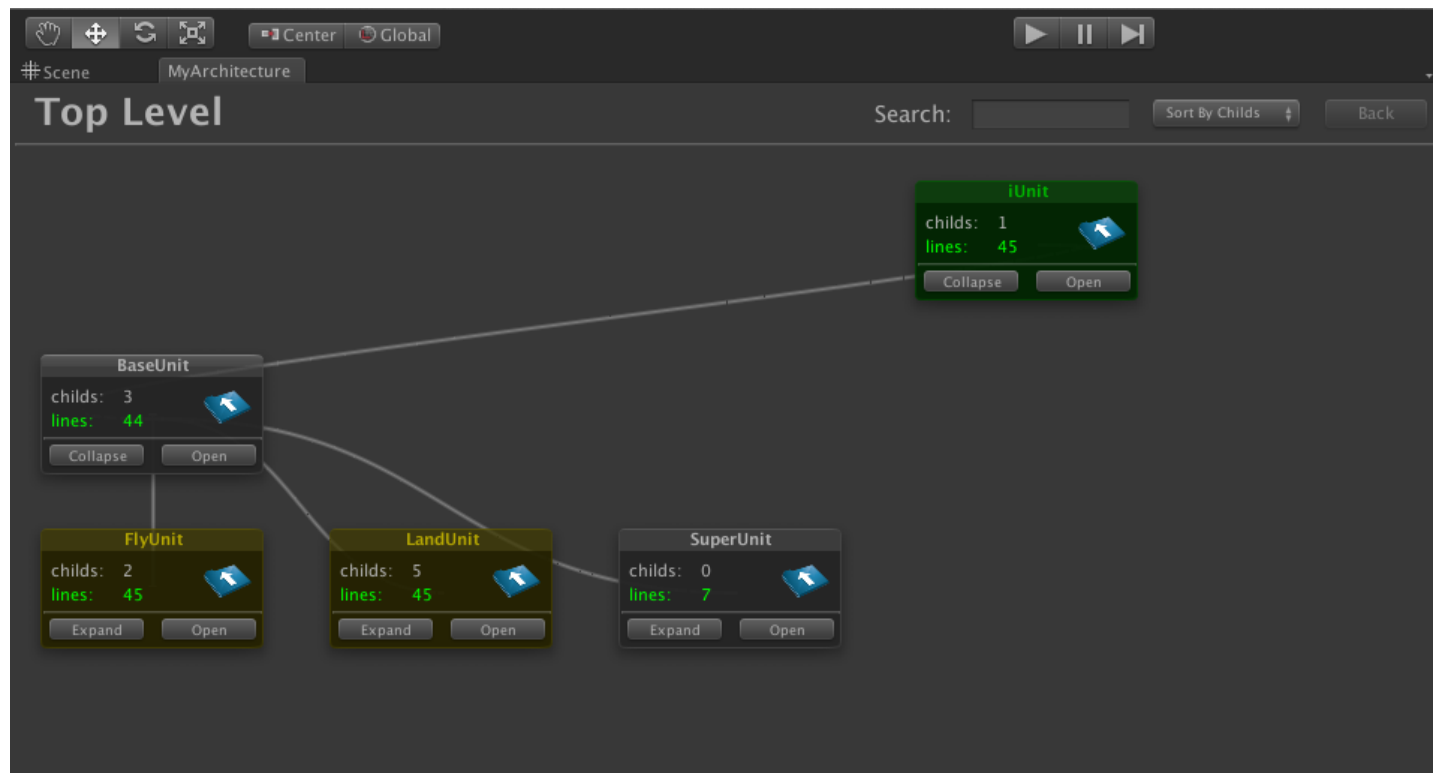

## TOP Menu:

1. **State indicator.** it will show the level at which you are. Or search line, if you in search mode.
2. **Search field.** You can search you classes as well. Like in any other browser.
3. **Sort Method.** You can sort your classes by childs count (recommended) or by size.
4. **Back Button.** As soon as you leave top level. Back button will become active. So you can navigate your histroy

## Class view:

1. **Class Info.** Here is some brief information of your class. Count of code lines, and count of childs
2. **Inside Button.** Press the button and go inside class (You will see only class childs on this level)
3. **Open Button.** Button will open class in your associated editor.
4. **Expand Button.** Will show class childs on current level. Expand button usage preview below

### Colors:

Green - interface

Yellow - abstract class

Grey - public class

Enjoy using :)
